

Micro-interaction Design Report

Project: Wishlist Heart Button Micro-interaction

Application: Fashion E-commerce App

Domain: UI/UX Design

Company: CODTECH IT SOLUTIONS

Created By: Soniya Sahu

1. Introduction

Micro-interactions are small UI design elements that provide feedback when users perform an action. This project focuses on designing a wishlist heart button interaction for a fashion e-commerce application to improve engagement and user experience.

2. What is Micro-interaction?

A micro-interaction is a small animation or visual response that occurs when a user interacts with an interface element. Examples include like buttons, toggle switches, loading animations, notifications, and confirmation messages. They make applications more interactive and user-friendly.

3. Purpose of Design

The purpose of this wishlist button micro-interaction is:

- Provide instant feedback to users
- Improve user engagement
- Make the shopping experience interactive
- Confirm that a product is added to wishlist
- Create a smooth and enjoyable user experience

4. User Flow

The user flow includes:

1. User views a fashion product card
2. User notices the empty heart wishlist icon
3. User taps the heart button
4. Heart changes into filled active state

5. Animation confirms the product has been added to wishlist

5. Interaction Details

Interaction: Wishlist Heart Button

Default State: Empty heart icon before click

Trigger: User clicks on heart icon

Animation: Smart Animate with color and scale transition

Duration: 300 milliseconds

Final State: Filled heart icon showing successful action

6. Tools Used

- Figma - UI Design and Prototype Creation
- UX Research - Understanding User Interaction
- Canva - Presentation and Visual Documentation

7. Conclusion

Micro-interactions improve user experience by making interfaces more responsive and engaging. The wishlist heart button interaction provides quick feedback, improves usability, and creates a better fashion shopping experience.
